ABOUT ME

Professional developer for 6 years. Passionate about programming and systems development, I'm always looking for knowledge and innovation. I have most of my experience in software development in the financial sector (credit services, public and private banking and Fintechs) and some brief knowledge in the healthcare sector. In addition to experience with development itself, I have also taught courses and classes in various segments of Information Technology. During my professional career, I mainly used Java and Spring framework for development. I have knowledge in developing APIs and web services both in monolithic architecture (with legacy and new systems) and microservices (SOA). I am familiar with relational and non-relational databases, such as Oracle SQL, MySQL, Postgres and MongoDB. And recently I'm deepening in learning integration with Amazon Web Services (AWS) features and other SaaS features. I ventured out for a year in the area of Quality Assurance, focusing on end-to-end testing automation, using Javascript frameworks and writing tests in Typescript. However, I have always carried my passion for the development of backend applications.Every day I try to be better and better at what I do and now I have the opportunity to give my knowledge to the world and help companies to build awesome tech!

PROFICIENCY STACKS

Java 8+	6 years	Angular	2 years
Spring Boot	5 years	AWS	1 year
Oracle SQL, MySQL	5 years	RESTful APIs and Web Services	5 years

STRENGTHS & SKILLS

Technical Skills:
- PLs AND FRAMEWORKS: JAVA EE 6+/SE 6-12 (JPA, EJB, JAX-RS, JAX-WS, JMS WebServices), Spring Ecosystem (Framework, Batch, Data, Security...), Oracle Service Bus 12c, Javascript/Typescript, Angular 2+, Delphi 7.
- IDEs: Eclipse, IntelliJ, Visual Studio Code, Oracle JDeveloper 12c;
- DATABASES: Oracle SQL | PL/SQL, MySQL, PostgreSQL, MongoDB;
- OS: Window; Linux Ubuntu, Mint, MacOS;
- VERSION CONTROL: GIT (Bitbucket, Github, Gitlab);
- SERVERS: Weblogic 12.1.3/12.2.1, JBoss EAP 6.x, JBOSS AS 7.x, Apache TomCat;
- OTHER TOOLS: JasperReports;
- TESTING and DOCUMENTATION: Postman, JMeter, Swagger API;
- DEVOPS: Docker (basics), Jenkins (CI);
- CLOUD: AWS (S3, RDS, Lambda, SMS).

WORK EXPERIENCE

Senior Software Engineer - Customer Success
WSO2
Provide free open source software – which can be used and improved by anyone – together with valuable business services that help customers save time at a reasonable cost.

📅 01/2022 – Current   📍 Sri Lanka   Business area: Technology (SaaS - B2B)

BNDES Open Banking Project:
- Main goal: To provide the best open banking solution support for the largest development bank in Latin America.
- Details and responsibilities: Provide support in the implementation of the Open Banking solution for the OB Brazil specification; Help the customer to adapt solutions to their needs; provide support for any problems.
- Outcome: As "Open Banking" is already applied in several countries around the world, Brazil could not be different. The need to integrate banks and their customers successfully led to the implementation of official Open Banking specifications for the BNDES.
- Technologies: Java 8+, Spring(Boot, Data, Security), MySQL, OpenAPI/Swagger.

Overall Support:
- Main goal: Supporting customers with WSO2 products, such as: API Manager, Identity Server and Enterprise Integrator.
- Details and responsibilities: Provide the customers the needed support for WSO2 products, for example: bugs, errors and customization support for WSO2 products.
- Technologies: Service Now.

Software Analyst and Developer
Cabal Brasil - Sicoob Cooperative Center (CCS)
Company's brief description: Sicoob is the largest system of credit unions in Brazil. It was founded in 1997 and currently has more than 3.5 million members, distributed in more than 400 credit unions. Sicoob's goal is to offer financial services to its members, such as loans, credit cards, investments, insurance, among others, in an ethical, transparent manner and at more competitive rates than those offered by traditional banks.

📅 06/2020 - 12/2021   📍 Brasília/DF - Brazil   Business area: Banking/Cooperative

Receivable Unit Payment Orders Project:
- Main goal: Create a project to comply with a new Brazilian Central Bank specification regarding the receivable unit payment contracts.
- Details and responsibilities: Development of batch applications using Spring Batch and Java 8+, to a new project that handles with receivable unit payment contracts (to be in compliance with Central Bank of Brazil); development of APIs for third-party integration, always valuing their security (Oauth2 authentication, cors filter...); Handling bank transactions using application interfaces and batch files processing; creating development patterns with others analysts and software architects;
- Outcome: Delivery of a robust, resilient system that met all the specifications of the Central Bank of Brazil.
- Technologies: Java 8+/Spring (Boot, Data, Batch, Framework), OpenAPI/Swagger, JBoss, Jenkins;

General Maintenance/Development:
- Details and responsibilities: maintenance of legacy systems which uses APIs development and documentation with Swagger; Client support;
- Outcome:Technologies: Java 7 and 8, JSF, PrimeFaces, JBoss server;

Backend Developer
PAG! Payment Methods
Company's brief description:

📅 01/2020 - 06/2020   📍 Vitória/ES - Brazil   Business area: Fintech

Banking Integration:
Main goal: create and develop a banking integration project between the company and other banks;
Details and responsibilities: Development of Spring Boot APIs integrated with AWS resources; assistance in developing requirements

for new applications; creation and elaboration of projects with bank integrations via files, online registration and others for the company's financial sector;

Outcome: File exchange (with payment information) between the company and multiple financial institutions in the country.

Technologies: Java 11+/Spring (Boot, Data,, Framework), AWS,

Quality Assurance Analyst

Autoglass

Company's brief description: Autoglass is a Brazilian company that operates in the automotive services segment, focusing on solutions for automotive glass. Autoglass offers repair and replacement services for automotive glass for cars, trucks and buses, serving both end customers and companies.

📅 Aug 2018 - Sep 2019   📍 Vila Velha/ES - Brazil   Business area: Automotive

Develop Test Plan:

Main goal: Create an integration between QA team and Development team to improve the testing culture in the company.

Details and responsibilities: Tests script writing, survey of requirements for the creation of a quality routine from the creation of products to the implantation; acting together with the Software Architecture team in creating development standards, deploying and introducing a culture of software quality for development teams; creation of automated tests written in TypeScript / JavaScript using mainly the following tools: Protractor + Jasmine + Cucumber; Performance tests with JMeter; API tests with Postman and SoapUI; Creation and configuration of test pipelines in Jenkins.

Outcome: The improvement of testing coverage, more resilient environment, improvement in the testing culture from the dev team.

Technologies: Typescript, Javascript, Protractor, Jasmine, Cucumber, JMeter, Postman, SoapUI, Jenkins.

Junior Developer / System Analyst

PAG! Payment Methods

Company's brief description:

📅 01/2017 - 08/2018   📍 Vitória/ES - Brazil   Business area: Fintech

Pag Invoice Project:

Main goal: Create and develop the whole invoice functionality in the app.

Details and responsibilities: Development of Web applications, APIs with Java EE, Oracle Service Bus (OSB), Spring; Preparation of forms and reports with JasperReports;

Outcome: APIs developed: Invoice details, invoice pdf, sending invoice to email in batch service.

Technologies: Java 8+, Oracle Service Bus (OSB), Oracle SQL, Spring Framework and Batch, JSF/Prime Faces.

App Development Support:

Main goal: Support the multiple fronts in the app.

Details and responsibilities: Control and deployment of application versioning in a development, approval and production environment together with system architects; support in the development of requirements for new applications; support to business / compliance areas in fraud detection.

Outcome:

Technologies: Java 8+, Oracle Service Bus (OSB), Oracle SQL, Spring Framework, JSF/Prime Faces..

EDUCATION

Bachelor's in Computer Engineering

Federal University of Espírito Santo

📅 Jan 2011 – Jul 2015 (Incomplete)

Bachelor's in Computer Science

Faesa University

📅 **Jan 2018 – Jul 2021 (Incomplete)**

CERTIFICATIONS & COURSES

- CTFL – Certified Tester Foundation Level (BSTQB – 2018)
- Cloud Computing - AWS, Google Cloud e Azure (Udemy - 2018)
- Scrum Foundation Professional Certification (2020)
- Spring REST Specialist (Algaworks - 2023)
- Full Stack Angular & Spring (Algaworks - 2023)

LANGUAGES

- Portuguese (Native)
- English (Bilingual)
- Spanish (Advanced)
